

Instructions for Using Your New Viking Super Hide Puller

Congratulations! You have purchased the finest skinning tool on the market! Following are some simple instructions for using your new Super Hide Puller. THANK YOU for your purchase!

1. To open, simply use your index finger as shown in the image on the right. Once the jaws are open, you push the open jaws against the skin of the animal and release the trigger as you get a “bite” on the skin. Note: The jaws will grip better on skin rather than skin and muscle as the muscle wants to try to tear away from the skin in some situations.

2. When you pull with the Super Hide Puller, you should hold the tool as shown in the image on the right. This allows the jaws to have something to pull against. So the proper pull on the hide will be with the handle facing down (curve will be either facing the animal or facing downwards.)

3. The image on the right shows the Super Hide Puller in action with the handle being used as designed. You can grasp even small amounts of skin with the tool and pull—it makes skinning much cleaner and easier. Simply wash when complete and it’s ready to use again! This product should last for years—with any issues please contact us: Info@vikingsl.com or 256-686-3268
